

Z-Products and US Daylight Savings Time Change

Does the Spring/Fall Time Change affect any of the Z-TEAM, ZENA, Zeke Agents, Workload, ESC, Ops Central or GRAPHX Products?

ZEKE's only effect of the "spring forward" time change would be relatively minor in scope. You may see some inflated average durations, but operationally, events outside the time change will continue to run normally, with the following exception.

Events that are scheduled to run between 2 and 3 AM should dispatch after the time change (provided all other dependencies have been met) at the "new" 3 AM. They should be TIMEOK'ed so they should dispatch normally.

The process performs similarly for the "fall back" time change. Jobs that have already run between 1 and 2 AM will not run again at the "new" 1 AM time, unless they are recurring event(s). In case an event that had become time satisfied during the "old 1 AM" time and is awaiting other datasets, tapes, etc..., will dispatch as soon as the dataset, tape, etc..., are available.

ZACK, ZARA, ZEBB and OASIS are not directly affected.

ZENA is not directly affected. However, we recommend that you check with your vendors for any OS or JAVA patches you might need.

ZEKE AGENTS are not directly affected. However, we recommend that you check with your vendors for any OS patches you might need.

WORKLOAD Products are not directly affected.

ESC and Ops Central are not directly affected.

GRAPHX is not directly affected.

If you have any further questions concerning the time change process, please contact us at 1-800-354-3578 or by email at support@asg.com.
